2. Type in your 10 or 11 digit extension and press the Log-In button. After log-in, a video overview (Phones Getting Started) automatically starts explaining basic phone operation and highlights the hold, transfer and conference features. (Note: The next time you launch PhoneGuide LIVE!, you will be automatically directed to the My Phone page.)

3. When the video completes, click the My Phone option in the left menu list. My Phone includes a picture of your phone with the telephone features indicated for each button as it is configured in the switch. Clicking on any feature label directs you to an explanation of how to use the feature. When finished on the page, press Return to Menu in the lower right corner of the screen.

4. The Phones Features menu directs you to a page listing features by category. By clicking on a feature name, you are directed to a page with video and/or text explanation of how to use the feature. When finished on the page, press Return to Menu in the lower right corner of the screen. This provides the same instruction as the My Phone page but may include features that are not programmed on your phone.
