Overview

The use of imaging and informatics applications is accelerating across the many facets of clinical healthcare and biomedical research. The UCLA Medical Imaging Informatics (MII) training program is educating the next generation of scientists on the development of methods and fundamental research underpinning medical and imaging informatics as a discipline, and its ability to transform the healthcare environment.

The Experience

Participants from Florida A&M University will spend 8 weeks at UCLA conducting independent research under the mentorship of MII training program faculty. Students will receive a stipend, live in on-campus housing, participate as an integral member of the research group, and be a part of the Bruin experience defined by a unique and diverse campus community.

Application Process

All students interested in engineering and health sciences and in good academic standing with a minimum GPA of 3.0 are encouraged to apply. Preference will be given to students who have completed two years of undergraduate study. Application deadline is November 12, 2014.
