

2.2.4 Action plan to increase undergraduate students' engagement in research.

Accomplishments to Date:

Several colleges and schools are providing start-up funding for new faculty hires to support the establishment of active research laboratories. This will increase the capacity of labs available for undergraduate students to participate in research (e.g., College of Science and Technology, FAMU-FSU College of Engineering, School of the Environment). Additionally, several schools and colleges are continuing their efforts to increase undergraduate research through Scholars-in-Resident programs that requires first-year students to be engaged in mandatory research during their first year (e.g., School of the Environment, School of Allied Health Sciences).
